Parts ... The average 70 kg (150 lb) adult human body contains approximately  $7 \times 10^{27}$  atoms and contains at least detectable traces of 60 chemical elements. About 29 of these elements are thought to play an active positive role in life and health in humans. The relative amounts of each element vary by individual, mainly due to differences in the proportion of fat, muscle and bone in their body. Composition of the human body - Wikipedia In total, by this estimate, the hydrogen and oxygen in your body are worth around £9.40 (\$11.40), but this is far outpriced by the 160g of potassium in your makeup, which was given a value of £86 (\$104), dominating your body's chemical worth. Again, if we try to buy an equivalent amount of potassium, we get wildly varying prices.
